Syllabus

Module A

Politics-Economics-Philosophy-Law

Proposed Topics

- Modern British Politics and Government
- Europe's Decade of Crises
- Re-engineering Social Security for the New Economy
- Globalisation Trends in the Context of Covid-19
- The Social Consequences of Unemployment
- The Economic Vote: How Political and Economic Institutions Condition Election Results
- Youth Unemployment During a Pandemic
- Global Geopolitics
- Understanding the UK's productivity puzzle
- Precedent in Legal Reasoning
- Human Right to Health
- Moral Philosophy, and Practical Ethics

This course is for students of:

Social Sciences and, in particular, fields related to: Politics and Administration, International Relations, Philosophy, Sociology, Economics and Trade, Law, Journalism, etc.

Module Description

Do we all have the right to health? Does economy influence the way people vote? What characteristics should a leader in times of crisis have?

During this programme, students will appreciate our strong focus on philosophy, politics and international economics enriched by some insight into legal systems. Examining the implications of decision-making, the consequences of competitive market economy and changes in social order, students will have the opportunity to explore a wide range of interdependent topics that shape contemporary world. Learning from and engaging with leading Oxford academics, this course will equip students with theoretical and methodological tools and expertise to engage systematically with political and economic questions in a broader international context.

Learning Outcomes:

- Understand the intricacies of UK and global politics for international relations, employment, poverty and inequality.
- Gain insight into how ancient stoic philosophy is still relevant today and how it relates to practical ethics.
- Have an understanding of international economy in the perspective of employment and social development.
- Be introduced to different types of research in social sciences.
- Comprehend the link between theory and practice in legal systems and global geopolitics.

Syllabus

Module B

Literature, Language, Digital Culture
and Communication

Module Description

Ever wondered what happens behind the scenes of the most successful British show worldwide of all time - Downton Abbey? Could reading classics be a way of understanding and clarifying our own thinking? Is digital culture changing and shaping our perception?

When we read, we are making sense not just of the words on the page but of the ideas being communicated to us. In this forward-thinking course, students are going to focus on the underlying messages of various media of communication across cultures. From Shakespearean tragedies and Charlotte Brontë's novels analysed and critically examined from academic as well as performing arts angles, through film experts to digital media and society, students will have the opportunity to engage with the latest research in literature, language and intercultural communication.

Learning Outcomes:

- Understand the different approach to literary analysis in the West.
- Have experience in critical analysis of literary texts and visual arts using different theoretical approaches.
- Look in detail at canonical texts by Shakespeare and Charlotte Brontë in their original context.
- Gain insight into cultural appropriation and representations of China in English literature.
- Become familiar with the major trends in digital cultures, modern scholarship and interdisciplinary studies
- Become acquainted with and aware of varying aspects of intercultural communication and changes in journalism.

Proposed Topics

- Representations of China in Eighteenth-Century English Literature
- Intricate Workings behind the Scenes of Downton Abbey
- The Changing Face of Journalism (in the West)
- Creative Multilingualism
- The Language of 'Romeo and Juliet'
- The Gilded Stage: A Social and Cultural History of Opera
- How Language Encodes Time
- Teaching with digital objects in the Humanities
- Online Social Networks
- Disinformation by Design
- Ways of Seeing: Interdisciplinarity in the Arts

This course is for students of:

English Language and Literature, Foreign Languages, Linguistics, Journalism, Translation, Chinese Language and Literature, Sociology, Anthropology, History, Drama, Film and Television, Media Studies, Arts, Cross-cultural Communication, Library Studies, Humanities and Education, etc.

Prof. Ros Ballaster

Syllabus

Module C

Medical and Life Sciences

Proposed Topics

- Social Determinants of Health
- NHS Systems in Various Countries: The United States and Germany
- Omics Tools and Techniques Used in Translational Research
- Development of Oncological Imaging
- Haematopoiesis: From Normal to the Disease State
- Macrophage & Anti-microbial Activity
- Computer-Aided Drug Design
- Drug Development and Clinical Trials
- Cell biology: Evolutionary Perspectives on Cancer and Ageing
- Neurodegenerative Diseases: The Coming Epidemic
- Biomedical Engineering: Tissue Reconstruction and Angiogenesis
- Deep Brain Stimulation and testing Development in Parkinson's Disease
- Ethics in and for Healthcare Markets

This course is for students of:

Medicine, Biology, Chemistry, Life and Biosciences, Genetics, Psychology, Public Health, and other related fields.

Module Description

Why do people get cancer? What happens to the brain when we get older? What is checkpoint therapy? Can stem cells be used to cure any disease? Is biodiversity really so important?

This module provides an insight into the hottest topics in medicine, health related subjects as well as environment. The greatest brains in the field will guide the students through the intricacies of medical and biological research, paying particular attention to the latest technology developments in gene-editing and oncological imaging. Students will investigate the processes involved in neurodegenerative diseases and oncology as well as will analyse the steps necessary in clinical trials and drug development. The course offers a preview of how interdisciplinary teams are the only way to advance biosciences and offers a comprehensive framework in translational medicine. Students will also examine various models of healthcare systems, discuss ethical issues related to bio/medical research matters and will analyse the complex interrelationships between humans, resource use, and natural environment, including cause/effect relationships and placing the issues within wider debates on sustainability.

Learning Outcomes:

- Develop understanding of the state-of-the-art tools and techniques in bio/medical research.
- Appreciate the importance of interdisciplinary teams in cutting-edge developments.
- Explore the ethical and regulatory issues in research.
- Understand the complexities of cancer research and neurodegenerative diseases.
- Have insight into the role of nanotechnology in bio/medical applications such as vaccinations, drug delivery or cell cultures.
- Investigate latest changes in population ageing and its impact on societies.

Syllabus

Module D

Business, Finance and Management

Module Description

Have you ever wondered how much a company is worth? Are interactions more important than processes? Can we live without money?

This module is for students interested in understanding the impact of business on our globalised world. Sustainable accounting, digital transformation, quantitative economics, game theory, cryptocurrency, innovation, labour markets, political economy of international business and the challenges posed by multi-level systems will stimulate students to critically reflect on the surrounding world, market mechanisms, policy options, innovation as well as global leadership and entrepreneurship in the 21st century.

Learning Outcomes:

- Improve understanding of macroeconomic process.
- Become aware of design thinking steps.
- Be able to identify latest fintech tools.
- Gain insight into foundations of financial stability policies.
- Master the most common game theory strategies.
- Be able to discuss the complexities of executive compensation.

Proposed Topics

- The British Economy - Yesterday, Today, Tomorrow
- Business in Post-Covid World
- Applications of Game Theory to Real World
- Risk Management
- Financial Crisis: Causes and Policy Issues
- Startups and the Macroeconomy in a Pandemic
- A Proposal for Central Bank Digital Currency
- Sustainable Accounting
- Management Concepts: Design Thinking and Agile Management
- Digital Finances and FinTech

This course is for students of:

Business, Economy, Finance, Accounting, Business and Public Administration, International Trade, Management, Marketing, other related fields and for students with strong interest in business matters.

Syllabus

Module E

STEM: Maths, Physics, Computer
Science and Engineering

STEM - - -

Proposed Topics

- Multicomponent High-entropy Materials Cantor Alloys
- Mathematical Modelling: Art of Problem Solving
- Renewable Energy for a Low-carbon Future
- Conservation laws. Noether's Theorem
- Particle Accelerators: From Making Higgs Bosons to Curing Cancer
- Human-AI Interaction: Digitalisation and Collective Action
- Transportation: Future Powertrains
- Intelligent Manufacturing of Personalised Products
- Modelling Sports Dynamics
- The Role of Big Data in a Smart City
- The Dark Side of the Force: Dark Energy and Dark Matter

This course is for students of:

Engineering related degrees, Material Science and Technology, Physics, Mathematics, Transportation, Space Science and Technology, Computer Science, Artificial Intelligence, etc.

Module Description

How will big data drive future smart city innovation? What is the best path to a low carbon future: solar, wind or nuclear? How will Artificial Intelligence enable rapid and stable intelligent manufacturing of personalised products?

Students will explore ways to apply creative reasoning and science to solve real problems while crossing traditional boundaries of disciplines. As disciplines converge into new hybrid fields students engage with the highest-level academicians and leading experts who invent and research the cutting-edge solutions of the modern world. This programme focuses on practical aspects of mathematical modelling, physics and engineering, asks questions about the worth of technology transfer and encourages students to find missing links between everyday phenomena..

Learning Outcomes:

- Have the requisite knowledge and understanding to make their own critical scientific assessments of current issues.
- Develop critical thinking skills necessary for mathematical modeling.
- Develop an understanding of the scale of the Universe.
- Describe and apply the principles of Constructor Theory.
- Gain insight into quantum computing and nanotechnology for a variety of applications.
- Comprehend the historical evolution of Newtonian mechanics and its place in contemporary world as well as in the future.
